

# DLR DIGITAL RADIO EXCELLENT CUSTOMER SERVICE STARTS WITH GREAT COMMUNICATIONS

The restaurant business is a very competitive. With over 1 million restaurants in the United States and 14 million employees generating \$709 Billion in revenue<sup>1</sup>, it is also one of the largest segments of the hospitality industry. Consumers have many restaurant choices from fine dining to fast casual and while the quality of food is important, great customer service is often what keeps customers coming back. Improving communications among your staff can directly benefit the service you provide and positively impact your consumers.

The Motorola DLR two-way radio can provide you instant, reliable, digital communications right out of the box, enhancing the way your staff coordinates operations and serves customers.

# KEEP YOUR COMMUNICATIONS PRIVATE WITHOUT INTERFERENCE

Restaurants are often found near retail stores in the same part of town or in the same shopping complex. Due to limited available analog frequencies, you may experience hearing other conversations or others listening to your private conversations. This is not only annoying to your employees but can disrupt operations, resulting in less satisfied customers.

The DLR radio can simply and easily provide the solution to this common problem.

These digital, 900 MHz, license free radios leverage frequency hopping technology. This technology enables the radio to continually change frequencies, making it virtually impossible for others to listen to your private conversations.

In addition, you can set up your radio system with a unique Profile ID, choosing from 10,000 available codes. This differentiates your system from a competitors system, thus enhancing privacy.
